

QuickBooks Online Advanced construction module

A photograph of two construction workers, a man and a woman, wearing white hard hats and orange safety vests over dark jackets. They are smiling and looking at a set of blueprints held by the woman. In the background, a red excavator is visible on a construction site.

Protect margins on every job

QuickBooks Online Advanced construction module connects estimating, job costing, and billing into one structured financial workflow built for how you operate. Instead of managing projects across spreadsheets and disconnected tools, financial data stays aligned from estimate to invoice. Clearer profitability. Faster billing. Better control.

Protect job profitability

Margins erode quietly when job data lives in spreadsheets and disconnected tools. With the construction module, you get real-time financial visibility while the job is still live.

- Structured budgets by phase and cost group
- Real-time estimates vs. actuals tracking
- Intuit AI insights flag cost pressure early

Bill with precision, get paid faster

Manual billing slows cash flow and creates disputes. With the construction module, billing is standardized so scope, cost, and invoicing stay aligned.

- AIA-style progress invoicing tied to project phases
- Seamless workflow from estimate through invoicing
- Automated follow-ups and billing alerts

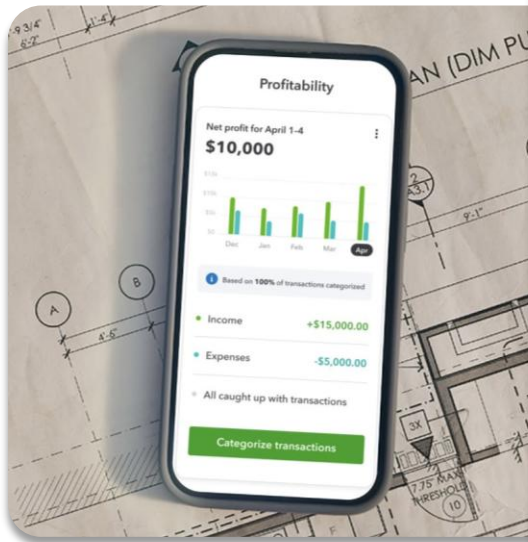

Scale without the chaos

As you add jobs, users, and revenue streams, financial complexity increases. With the construction module, you get the structure your team needs without the ERP complexity.

- Role-based permissions
- Unlimited classes and locations
- Audit trails and financial governance

From proposal to payment—without the gaps

Stop re-entering data across disconnected tools. QuickBooks Online Advanced construction module keeps every project workflow aligned, from the first proposal through final payment, so you always know where every job stands and nothing falls through the cracks.

Let AI work alongside you

Real-time budget insights: Intuit AI monitors project budgets continuously and flags cost pressure as it develops, not after the job closes.

Project management agent: Stay on top of cash flow, profitability, and project progress in one place, with Intuit AI helping you track phases and spot what needs attention.

Personalized business intelligence: Custom KPIs, dashboards, and AI-driven insights give you a unified view of performance across every job, so data turns into decisions—not more questions.

Popular features

Proposals

Built-in document builder with integrated e-signatures

AIA-style invoicing

Track contract value, invoiced-to-date, and balance by phase

Connected A/R workflows

Automated billing reminders and payment tracking

Cost groups

Labor, materials, equipment, and subcontractor tracking

Schedule of values
